At a glance

What you would do

Senior engineer providing hands-on technical support for cell therapy manufacturing, trending process data, leading deviation investigations, and implementing improvements.

Who can apply

- **Majors named:** Chemical Engineering, Biochemical Engineering, Biotechnology
- **Degree and experience:** PhD with 1+ years, MS with 5+ years, or BS with 8+ years of hands-on industry experience.

Skills mentioned

Teamwork & collaboration · Communication · Problem solving & root cause · Automation & controls · Supply chain, planning & logistics · Data analysis & statistics · Lean / Six Sigma / continuous improvement · GMP, validation & regulated quality

Position Summary

We are seeking an experienced Senior Process Engineer to join our Manufacturing Sciences & Technology (MS&T) function as a member of the site-based MS&T team at AstraZeneca’s Rockville, MD cell therapy manufacturing facility.

This position focuses on ensuring robust, compliant, and cost-effective manufacturing of clinical and commercial cell therapy products.

Responsibilities include leading on-the-floor / hands-on technical support, developing technical instructions, procedures, and operator training content, performing data analysis and process performance trending, leading complex deviation investigations, driving implementation of CAPAs and continuous improvement through change controls, and contributing to validation and regulatory deliverables. These responsibilities will be exercised through the scope of supporting technology transfers, clinical manufacturing, site readiness, process validation/PPQ, commercial manufacture readiness, and product lifecycle management activities.

The ideal candidate brings hands-on experience with cell therapy unit operations through previous experience in process development and/or manufacturing, as well as expertise in technology transfer. Experience with process validation and commercialization activities is desired. This position will report to Director, MS&T, Cell Therapy Development and Operations.

Key Responsibilities

Site manufacturing support

Process Execution Support: Provide day-to-day technical support for cell therapy manufacturing, including on-the-floor support for critical campaigns (including occasional off-shift support where required) Operations Support: Represent Site MS&T function at site operational tier meetings, providing collaborative inputs that drive site activities Data trending and analysis: Maintain manufacturing data tracking system and control charts, perform trend analyses, identify signals, and drive timely signal-to-action with clear documentation and cross-functional alignment. Process performance monitoring: Conduct batch record review, deviation assessment, and data trending to ensure robustness of cell therapy manufacturing processes. Deviation/CAPA Support: Lead or co-lead technical investigations for deviations and process excursions, perform root cause analysis, develop and implement CAPAs with appropriate data. Continuous improvements: Identify, justify, and implement continuous improvements by shepherding changes through cross■functional change controls with appropriate risk assessments and comparability. Raw materials: Support qualification of critical materials (e.g., cytokines, viral vector, single-use assemblies) and assess impact of raw material changes, and contribute to second-source strategies Automation: Partner with automation/digital manufacturing teams to implement electronic batch record improvements Documentation & GMP Compliance: Author and revise batch records, SOPs, and technical reports; protocols, summary reports, ensure adherence to cGMP/ATMP requirements and data integrity principles (ALCOA+). Training & Knowledge Transfer: Deliver operator training on critical process steps or process changes; contribute to lessons-learned, playbooks, and best practices across sites. Regulatory Contributions: Draft and review CMC sections (Module 3) response to agency question, support health authority and internal audits/inspections.

Technology Transfer & Process Validation

Draft and review risk assessments and comparability study design Contribute to technology transfer packages (process descriptions, URS inputs, BOMs, risk assessments), implement process changes, coordinate execution of engineering runs and comparability/bridging studies, author technical reports Translate process characterization outputs from development into manufacturing controls, and draft sections of PPQ protocols/reports Provide on■the■floor technical support during scale■up, engineering runs, PPQ batches, and commercial manufacturing campaigns (including off■shift support when required).

Cross■Functional Collaboration

Position serves as primary interface between site Manufacturing, site Quality, site Supply Chain, and global functions of Process Development and CMC regulatory Support lifecycle management for cell therapy processes, including continuous improvement initiatives and post-approval changes

Required Qualifications

Education

PhD in Chemical Engineering, Biochemical Engineering, Biotechnology, or related field with 1+ years of industry experience; OR M.S. with 5+ years of hands■on industry experience, OR B.S. with 8+ years of hands■on industry experience.

Technical Skills

Strong technical and hands-on expertise in key cell therapy unit operations and common cell therapy processing equipment Demonstrated experience working in GMP environments, including batch record execution or review, deviations, and investigations. Proficiency with statistical analysis (including univariate, multi-variate analysis, control charts) Demonstrated ability in accurate and thorough technical writing, paired with clear and concise verbal communication Strong data analysis, and problem■solving skills.

Soft Skills

Excellent cross■functional communication and collaboration. Ability to translate complex data into clear decisions and regulatory-ready narratives. Excellent problem solving, cross-functional leadership, and communication under time-sensitive conditions.

Preferred Qualifications

Experience with late■stage clinical manufacturing support of cell therapy products Experience with process validation and commercial readiness of cell therapy products

Work Environment

On-site in Rockville, MD Ability to travel ~15% to other manufacturing facilities On-call rotation during engineering/PPQ/critical campaigns

The annual base pay (or hourly rate of compensation) for this position ranges from $94, 256.80 - $141, 385.20. Our positions offer eligibility for various incentives—an opportunity to receive short-term incentive bonuses, equity-based awards for salaried roles and commissions for sales roles. Benefits offered include qualified retirement programs, paid time off (i.e., vacation, holiday, and leaves), as well as health, dental, and vision coverage in accordance with the terms of the applicable plans.
