Position Overview

The Automation Engineering Intern will support the development, implementation, validation, and continuous improvement of automated manufacturing equipment and processes. This position will work alongside engineering and manufacturing teams to support automation projects, troubleshoot equipment issues, and improve manufacturing efficiency while maintaining quality and regulatory compliance.

Quick Summary

The Automation Engineering Intern will assist with automated manufacturing systems, equipment performance analysis, and process improvements in a medical device manufacturing environment. Responsibilities include supporting equipment validation, troubleshooting automated processes, reviewing technical documentation, and assisting with automation and controls projects.

The successful candidate must demonstrate strong analytical and problem-solving skills, effective communication, attention to detail, and an eagerness to learn. The ability to maintain accurate documentation and understand the importance of quality and regulatory requirements is essential.

Basic Background Requirements

This position will require

- Currently enrolled in a four-year degree program in Electrical Engineering, Mechanical Engineering, Mechatronics, Automation Engineering, or a related field.
- Interest in automation, controls systems, and manufacturing equipment.
- Familiarity with PLCs, industrial controls, or automated manufacturing systems preferred.
- Experience with Allen-Bradley PLCs, Cognex Vision Systems, or Fanuc Robotics is a plus.
- Ability to analyze equipment performance and assist with troubleshooting.
- Understanding of engineering principles, manufacturing processes, and equipment qualification (IQ, OQ, PQ) preferred.
- Ability to create and maintain technical documentation, including protocols, work instructions, and engineering reportsStrong analytical, organizational, communication, and problem-solving skills.

Key Performance Objectives

Short Term: (0 to 3 months) Learn KEIND Quality system requirementsBuild relationships with team membersBegin documenting and developing process flows for launch of critical medical device product.Design equipment or tooling to support a manufacturing processWrite technical documentationAssist in validation efforts for commissioning of production systemsMaintain customer specific system documentation in support of FDA regulatory requirements Learn and adopt Kimball Solutions philosophies and cultureWork with project managers in the execution of project plansParticipate in risk assessment activities (PFMEA, DFMEA)Participate in Lean manufacturing training and projects

Kimball Medical Solutions provides 3 weeks of PTO starting your 1st year in addition to 10 paid holidays. Potential quarterly incentive bonus based on company performance. Major health, dental, vision, and complementary insurances starting day 1. We offer a 50% match on your first 6% of 401k contribution with opportunity for an employer contribution annually.

Kimball Electronics is an Equal Opportunity Employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, age, national origin, genetic information, disability or protected veteran status.
