At a glance

What you would do

Co-op helping project teams design control systems: building instrument lists, configuring HMI screens and PLC/DCS logic, and starting up systems onsite.

Who can apply

- **Majors named:** Any engineering degree
- **Degree and experience:** Full-time bachelor's student in an engineering or systems-related technical field; 3.0+ GPA; US work authorization.

Skills mentioned

Communication · Problem solving & root cause · Automation & controls · Supply chain, planning & logistics

Full posting text

Overview

Systems Engineer Co-ops will be assigned to work with an experienced project team. Individual responsibilities will be designated by the lead engineer based on the specific requirements of each project and the individual’s capabilities.

Responsibilities

Systems Engineer Co-ops will be assigned to work with an experienced project team. Individual responsibilities will be designated by the lead engineer based on the specific requirements of each project and the individual’s capabilities.

Following is a chronological overview of a typical project and the tasks with which and intern or part time engineer may assist. Percentages represent the tasks relative effort but will vary from project to project.

Instrumentation & Electrical Design

Create instrument lists by examining P&ID drawingsCompile submittal and procurement documentation for controls and instrument hardwareProvide technical support for panel fabrication techniciansInspect completed control enclosures

System Design and Configuration

Participate in customer design review meetingsAssemble development system using project hardware and computersConfigure user interface and HMI screensConfigure DDC, PLC and/or DCS control algorithmsDraft system documentation from templatesAssist is customer demonstrations and acceptance testing

Onsite System Startup

Works in a supervised role and/or with a team at a customer siteInstall project software and configuration onto site systemsParticipate in point-to-point loop checksPerform instrumentation and software calibration and tuningParticipate in functional tests of all systemsTroubleshoot installation discrepanciesProgram field modifications as requiredAssist with developing commissioning test plans and documentation updates/redlinesAssist with developing training documentation/presentation on operations and maintenance of system

Qualifications

Full-time student statusStrong academic achievement, maintaining a GPA of 3.0 or aboveEnrollment in a Bachelor's program in a Technical Field, related to Engineering or SystemsPassionate about problem solving and developing solutionsCandidates must be authorized to work in the U.S. without RoviSys sponsorship

Compensation & Benefits Highlights

Competitive Hourly Rate: $25/hrTravel Perks: Travel incentives + per-diem packages for field assignmentsGrow With Us: Ongoing training, certifications, and professional development support
