We foster an inclusive culture, recognizing your contributions and offering opportunities to grow your career like never before. Together, we make a difference in the lives of our patients and customers. Are you ready to join us?

The Sr. Automation & Control Engineering is responsible for the design, development, implementation, operation, and maintenance of instrument/electrical and automation control systems. Focus is on mathematical modelling of systems of a diverse nature, analyzing their dynamic behavior, and using control theory to create a controller that will cause the systems to behave in a desired manner. May specialize in the design, configuration, and automation of systems

Specifics include

- Lead automation and capital projects from concept through validation, including requirements development, system design, vendor coordination, installation, commissioning, and compliance with cGMP requirements.
- Design, program, troubleshoot, and optimize manufacturing automation systems, including PLCs, HMIs, SCADA systems, inspection systems, and process controls.
- Partner with production teams to improve equipment reliability, throughput, quality, safety, and operational efficiency while providing advanced technical support for complex issues.
- Manage capital projects and budgets (up to approximately $2M), develop business justifications, control costs, and make equipment and technology recommendations.
- Develop and maintain engineering documentation including Functional Requirement Specifications (FRS), qualification protocols (IQ/OQ/PQ), SOPs, change controls, risk assessments, and CAPA-related automation improvements.
- Serve as the technical lead for manufacturing automation initiatives, driving continuous improvement, validation activities, and implementation of new or upgraded production, utility, compounding, filling, and packaging systems.
