Industrial AI Engineer

Siemens · Grand Prairie, TX

Job ID (this archive)	MFG-029
Employer	Siemens
Location	Grand Prairie, TX
Career stage	Experienced
Location group	DFW area
Major (archive tag)	Computer Science
Sector area	Factory software & data
Industry (LinkedIn)	Automation Machinery Manufacturing
Pay listed	Not listed
Stated rules	No visa sponsorship
Posted / closes	2026-10-24 · 2026-11-23
Status when checked	Accepting applications on LinkedIn (Nov 1, 2026)
Source page	https://www.linkedin.com/jobs/view/4482372615/
Captured	2026-11-01

At a glance

What you would do

Engineer building machine learning models from factory production data and deploying them on real shop floors to improve efficiency, quality, and reliability.

Who can apply

- **Majors named:** Computer Science, Artificial Intelligence, Data Science, Engineering
- **Degree and experience:** Bachelor's or master's in CS, AI, data science, engineering, or related; 2+ years deploying AI/ML models in production.

Skills mentioned

Teamwork & collaboration · Communication · Problem solving & root cause · Automation & controls · Safety · Lean / Six Sigma / continuous improvement · Programming · ERP / SAP / MES · Cybersecurity & OT security

Full posting text

Here at Siemens, we take pride in enabling sustainable progress through technology. We do this by empowering customers and teams to combine the real and digital worlds, driving smarter, more efficient, and resilient industrial operations. Improving how we live, work, and move today and for the next generation.

Come transform the everyday with us!

We are seeking an Industrial AI Engineer in the Dallas- Fort Worth area.

The Industrial AI Engineer will develop and scale Industrial AI solutions that deliver measurable improvements in manufacturing performance, including efficiency, productivity, quality, and reliability. Working closely with data, platform, and factory teams, they will translate AI concepts into production-ready solutions, validate them in live industrial

environments, and drive successful adoption on the shop floor.

This role focuses on transforming data, AI, and automation into practical applications that create tangible business value for customers and Siemens. The AI Engineer will help advance continuous improvement by applying AI to solve real-world industrial challenges and enable repeatable deployment across manufacturing operations in the USA, Canada and Mexico.

You'll make a difference by

- Being responsible for developing and deploying AI models that address a wide range of industrial and manufacturing challenges through data-driven insights and decision-making.
- Working with time-series shopfloor data and MES/IT data to design and build AI solutions that are aligned with real production processes and operational needs.
- Performing data preparation, featuring engineering, and model development, ensuring that contextualized industrial data is effectively utilized for AI applications.
- Deploying AI models into real factory environments, ensuring reliable performance under real-world conditions such as data variability, latency, and integration with operational workflows.
- Collaborating closely with Cybersecurity, Data Architects, System Architects, software developers, and factory teams to ensure AI solutions are scalable, reusable, and integrated into industrial systems.
- Engaging and collaborating with external partners to ensure effective implementation of standardized Industrial AI solutions.
- Continuously validating and refining AI models based on production data and feedback, ensuring that solutions deliver measurable improvements in operational performance and business outcomes.
- Leading the scaling of AI solutions across plants, enabling repeatable deployment patterns and contributing to the standardization of Industrial AI capabilities across the organization.

You will make an impact with these qualifications:

Basic Qualifications

- Bachelor's or Master's degree in Computer Science, Artificial Intelligence, Data Science, Engineering, or a related field.2+ years of experience with the following:Developing and deploying AI/ML models in production environments, preferably within industrial, manufacturing, or automation domains.
- Programming in relevant languages (e.g., Python, R, Java) and common AI/ML frameworks (e.g., TensorFlow, PyTorch, scikit-learn), with hands-on experience building and testing machine learning models.
- Deploying and validating AI models in industrial or production environments.
- Working in cross-functional, customer-facing teams and adapting solutions to evolving requirements.
- Working with data-driven systems in operational or industrial environments.
- Willingness and ability to travel up to 20% to be with customer teams during critical deploymentAuthorized to work in the United States without the need for sponsorship now or in the future.

Preferred Qualifications

- Strong analytical, problem-solving, and communication skills, with the ability to translate complex technical concepts into practical industrial applications.
- Experience working in production manufacturing environments, including piloting, validating, and refining AI solutions in operational settings based on production feedback.
- Familiarity with Industrial AI platforms and ecosystems, including Siemens solutions (e.g., Senseye, Industrial Edge) or comparable AI/IoT platforms, as well as industrial automation systems, OT/IT integration, and cloud-based AI deployment.
- Knowledge of data preparation, feature engineering, AI model evaluation, and compliance, safety, and regulatory requirements for AI in industrial environments.
- Experience managing multiple projects and workstreams in a deadline-driven environment while supporting the continuous improvement of AI solutions through performance monitoring, model drift mitigation, model refinement, and scaling across multiple deployments.

- Proven ability to share deployment learnings and collaborate with factory teams to drive continuous improvement and adoption of AI solutions.
