At a glance

What you would do

Intern analyzing clinical drug manufacturing data with Python prototypes and evaluating digital, robotics, and automation projects for biopharmaceutical production.

Who can apply

- **Majors named:** Computer Science, Biomedical Engineering, Chemical Engineering, Related field
- **Degree and experience:** Rising sophomore, junior, or senior in computer science, biomedical or chemical engineering, or related field; graduating after August 2027; basic Python helpful.

Skills mentioned

Teamwork & collaboration · Automation & controls · Supply chain, planning & logistics · Data analysis & statistics · Programming

Full posting text

We are looking for rising sophomores, juniors, and seniors studying Computer Science, Biomedical Engineering, Chemical Engineering or a related field for a 12-week internship role at our site in Gaithersburg, MD from May 24, 2027 to August 13, 2027.

Position Description

Analyze clinical manufacturing process data and develop Python-based prototypes for predictive analytics, anomaly detection, and decision support to improve operational efficiency and process understanding. Support digital manufacturing projects, including electronic batch records, digital supply chain, digital technology transfer, and digital twins, by mapping processes, equipment, data sources, and interfaces to define data requirements and integration needs. Assess robotics and intelligent automation opportunities, such as automated material handling, robotic sampling, machine

vision, and laboratory automation, by developing use cases and conducting technology assessments and feasibility studies. Collaborate with manufacturing, engineering, automation, data science, and digital technology teams to identify high-value digital opportunities and develop business cases, requirements, and implementation roadmaps.

Position Requirements

- Rising sophomores, juniors, and seniors studying Computer Science, Biomedical Engineering, Chemical Engineering or a related field.
- Introductory exposure to machine learning, generative AI, or large language models through classes or small projects is preferred.
- Basic Python programming skills and experience analyzing or visualizing data through coursework, academic research, or personal projects are beneficial.
- Familiarity with tools such as Pandas, NumPy, scikit-learn, SQL, or Power BI is a plus.
- Coursework or project experience involving digital twins, process simulation, robotics, computer vision, or industrial automation is a plus.
- An interest in biopharmaceutical manufacturing and a willingness to learn how digital technologies support manufacturing operations are beneficial.
- Experience collaborating on student projects, researching technical topics, and clearly presenting findings is beneficial.
- Candidates must have an expected graduation date after August 2027.
- US Work Authorization is required at time of application.
- This role will not be granting CPT support.
- Ability to report onsite to Gaithersburg, MD site 5 days per week. This role will not provide relocation assistance.
- Compensation: $37 - $39 per hour.
