Product Security Engineer (Starlink)

SpaceX · Bastrop, TX

Job ID (this archive)	MFG-035
Employer	SpaceX
Location	Bastrop, TX
Career stage	New grad / early career
Location group	Texas (outside DFW)
Major (archive tag)	Cybersecurity Technology & Policy
Sector area	OT & industrial cybersecurity
Industry (LinkedIn)	Aviation and Aerospace Component Manufacturing
Pay listed	Not listed
Stated rules	U.S. citizen / ITAR
Posted / closes	2026-10-22 · 2026-12-16
Status when checked	Accepting applications on LinkedIn (Nov 8, 2026)
Source page	https://www.linkedin.com/jobs/view/4455588837/

Full posting text as it appeared on LinkedIn on Nov 8, 2026, saved for ECS 1100. Postings change and close often; open the source page above for the current version before applying.

At a glance

What you would do

Engineer designing and building security software, cryptographic services, and protections for Starlink satellites, dishes, routers, gateways, and factory processes.

Who can apply

- **Majors named:** Computer Science, Any STEM degree
- **Degree and experience:** Bachelor's in computer science or other STEM field, or 2+ years security software development instead; programming and security solution design experience.

Skills mentioned

Communication · Programming · Cybersecurity & OT security

Full posting text

SpaceX was founded under the belief that a future where humanity is out exploring the stars is fundamentally more exciting than one where we are not. Today SpaceX is actively developing the technologies to make this possible, with the ultimate goal of enabling human life on Mars.

PRODUCT SECURITY ENGINEER (STARLINK)

At SpaceX we’re leveraging our experience in building rockets and spacecraft to deploy Starlink, the world’s most advanced broadband internet system. Starlink is the world’s largest satellite constellation and serves millions of users worldwide. We design, build, and operate all parts of the system – thousands of satellites and all of the space-ground infrastructure necessary for a constellation of that size. As we scale the constellation to hundreds of thousands of satellites, and become a foundation of global connectivity both on earth (and in space), we are looking for excellent engineers to help us build secure, defensible systems from the ground up.

Skills

In this role, you will influence the security of software across our space and terrestrial systems. Ideally, you have notable skills in one or more of the following:

Applied cryptographyNetwork securityOperating system securitySecure/Authenticated bootIncident response and adversary detectionVulnerability researchSoftware engineering

Responsibilities

Design and build security infrastructure for Starlink, including cryptographic services and other security-critical servicesDevelop security features for Starlink systems, including our router, dish, gateways, and satellitesDesign security into factory processes and provide network services in support of thisMaintain existing production systems and improve security posture via both direct implementation and recommendations to other teamsBuild prototypes and help identify, design, and test security improvementsFurther our mission of providing secure and reliable Internet to underserved communities

Basic Qualifications

Bachelor's degree in computer science or another STEM discipline; OR 2+ years of professional experience in security software development in lieu of a degreeExperience with one or more software development languages (i.e. Python, C++, Golang)Experience designing and implementing security solutions for operating systems, distributed systems, or other enterprise/large-scale infrastructure

Preferred Skills And Experience

Experience contributing security improvements to complex systemsExperience working with special purpose security hardware such as Trusted Platform Modules (TPMs) and Hardware Security Modules (HSMs)Fundamental understanding of network protocols; including the TCP/IP stack as well as UDP based protocolsExperienced in navigating large, complex, interactive systemsFlexibility, communicating clearly, and establishing and maintaining productive working relationships with other engineering teamsExcellent communication skills, both written and verbalAbility to work both independently and in a teamDemonstrated ability to deal with ambiguity and to learn new technologies quicklyAdvanced degree in a technical or engineering discipline

Additional Requirements

Must be willing to work extended hours and weekends as needed

Itar Requirements

To conform to U.S. Government export regulations, applicant must be a (i) U.S. citizen or national, (ii) U.S. lawful, permanent resident (aka green card holder), (iii) Refugee under 8 U.S.C.1157, or (iv) Asylee under 8 U.S.C.1158, or be eligible to obtain the required authorizations from the U.S. Department of State. Learn more about the ITAR here.

SpaceX is an Equal Opportunity Employer; employment with SpaceX is governed on the basis of merit, competence and qualifications and will not be influenced in any manner by race, color, religion, gender, national origin/ethnicity, veteran status, disability status, age, sexual orientation, gender identity, marital status, mental or physical disability or any other legally protected status.

Applicants wishing to view a copy of SpaceX’s Affirmative Action Plan for veterans and individuals with disabilities, or applicants requiring reasonable accommodation to the application/interview process should reach out to EEOCompliance@spacex.com.
