At a glance

What you would do

Process engineer supporting aerospace casting, coating and brazing production, writing work instructions, running metallurgical failure studies and driving cost reductions.

Who can apply

- **Majors named:** Any engineering degree, Materials Science, Metallurgy
- **Degree and experience:** Bachelor's in Engineering, Materials Science or Metallurgy; 3 years manufacturing engineering experience preferred

Skills mentioned

Teamwork & collaboration · Problem solving & root cause · Automation & controls · Safety · Supply chain, planning & logistics · Data analysis & statistics · Lean / Six Sigma / continuous improvement

Full posting text

Responsibilities

The Process Engineer position will be in our Wichita Falls, Texas facility and will support manufacturing through process control, improvement initiatives, and assume direct responsibility for integrity for assigned products.

This involves quoting new developmental parts, attending to process engineering concerns for developmental parts, assisting with obtaining new business, working to improve existing processes, developing and using new technologies, and providing technical support to Howmet Aerospace, Wichita Falls. Ability to conduct metallurgical studies to support the organization in the areas of product quality; failure analysis and determination of root cause.

Job Roles

Systems thinker--sees the business and its operation holistically; understands actions and reactions; considers multiple pathways of potential effect before decisions; thinks strategically about interventions with an eye toward scaleOptimizer--constantly challenging the organization to work smarter; supports others to ensure they have what they need to do their work successfullyAnticipation--looks ahead to minimize potential issues and maximize advantages; prepares others for what comes nextOperational accelerator--drives continuous improvement; understands ramifications of automation and other advances; advocates for safety, ergonomics and scalable solutionsOrganization and structure--works within existing structures while striving to improve and standardize them; provides accurate information; galvanizes others toward common goalsInfluence--leverages knowledge, relationship, data and perspective to persuade, educate and navigate; gains buy in and adoption of ideas and practices at scale; interacts with a variety of stakeholdersData informed--focused on things that drive quantifiable business outcomes; evaluates based on quantitative feedback; knows and explains the “why” behind actionsPrioritized reaction--handles the unexpected without losing sight of important objectives; reacts where greatest leverage points existRelationship--connects individually and with teams across shifts and practices; builds rapport and commonality; creates a “win together” ethic; serves as liaison between shop floor and engineering; keeps the pulse of the floor; helps people feel heard

Job Responsibilities

- Plans and formulates engineering programs within area of assigned responsibility.
- Implements and reviews process design for compliance with engineering principles, company standards and customer contract requirements and related specifications.
- Supports activities concerned with technical development, customer issues, cost reduction programs and in resolving engineering design and test problems.
- Evaluates and approves design changes, specifications and drawing releases.
- Prepares interim and completion project report, as necessary.
- Provide technical support for assigned coating, brazing and/or manufacturing area of assignment.
- Interfaces with production personnel regarding all processing requirements. Interact with suppliers and customers on technical issues.
- Performs process quality investigations, as required.
- Develops and implements process improvements and cost reductions.
- Designs tools and fixtures pertinent to processing.
- Generate material requisitions to initiate procurement.
- Translate customer requirements into usable work instructions and interface with customer on technical issues.
- Review purchase orders, specifications and blueprints for impact.
- Assembles data packages for customer approval.
- Specifies processing and generates work instructions.
- Actively pursues elimination of waste, the improvement of equipment reliability and efficiency, and the reduction of operating costs. Employs statistical methods as necessary.
- Continuously improves the performance of job-related responsibilities.

Qualifications

Basic Qualifications

- Bachelor’s Degree in Engineering, Materials Science or Metallurgy from an accredited institution.
