Senior Manufacturing Engineer

KPIT · San Antonio, TX

Job ID (this archive)	MFG-079
Employer	KPIT
Location	San Antonio, TX
Career stage	Experienced
Location group	Texas (outside DFW)
Major (archive tag)	Mechanical Engineering
Sector area	Discrete & advanced manufacturing
Industry (LinkedIn)	Manufacturing; Motor Vehicle Manufacturing
Pay listed	Not listed
Stated rules	No GPA or sponsorship rule stated
Posted / closes	2026-10-20 · 2026-11-19
Status when checked	Accepting applications on LinkedIn (Nov 1, 2026)
Source page	https://www.linkedin.com/jobs/view/4480473243/
Captured	2026-11-01

At a glance

What you would do

Manufacturing engineer designing, installing and validating assembly workstations and automated equipment, writing process documents and troubleshooting production issues.

Who can apply

- **Majors named:** Manufacturing Engineering, Mechanical Engineering, Industrial Engineering
- **Degree and experience:** Bachelor's in Manufacturing, Mechanical, Industrial Engineering or related technical field; 5+ years experience

Skills mentioned

Teamwork & collaboration · Communication · Problem solving & root cause · Automation & controls · Safety · Supply chain, planning & logistics · Data analysis & statistics · Lean / Six Sigma / continuous improvement · Excel · CAD · GMP, validation & regulated quality · Quality tools

Full posting text

KPIT is a global technology company with software solutions that will help mobility leapfrog towards autonomous, clean, smart and connected future. With 10000+ Automobelievers across the globe, specializing in embedded software, AI & Digital solutions, KPIT enables customers accelerate implementation of next generation mobility technologies. With development centers in Europe, Americas, Japan, China, Thailand and India – KPIT works with leaders in mobility and is present where the ecosystem is transforming.

- Job SummaryThe Manufacturing Engineer is responsible for developing, implementing, and optimizing manufacturing processes, equipment, and workstations to support safe, efficient, and high-quality production. This role partners closely with Product Engineering, Operations, Quality, and Supply Chain teams to ensure manufacturability, process

robustness, and seamless product launches.

- ResponsibilitiesDevelop, procure, install, and validate manufacturing workstations and equipment ranging from manual assembly stations to fully automated production and test systems.
- Provide Design for Manufacturability (DFM) feedback to product engineering teams to improve manufacturability, reduce production costs, and optimize assembly processes.
- Design, document, and implement safe, efficient, and repeatable manufacturing processes.
- Create and maintain Process Flow Diagrams (PFDs), PFMEA, Control Plans, Standard Work Instructions, and manufacturing documentation.
- Lead manufacturing process development from concept through production launch. Support equipment commissioning, process validation, and production readiness activities.
- Troubleshoot and resolve manufacturing equipment, tooling, and process issues during launch and production. Develop and implement process improvements to enhance safety, quality, productivity, and cost performance.
- Collaborate with Quality teams to establish process controls and ensure compliance with customer and internal requirements. Support root cause analysis, corrective actions, and continuous improvement initiatives.
- Train operators and technicians on manufacturing equipment, processes, and standard work. Work closely with Engineering, Operations, Quality, Maintenance, Supply Chain, and external suppliers to achieve manufacturing objectives.
- Support assembly process development, tooling selection, fixture design, and automation integration.
- Ensure manufacturing processes are robust, capable, and ready for seamless transfer to Operations.
- RequirementsBachelor's degree in manufacturing engineering, Mechanical Engineering, Industrial Engineering, or related technical field.5+ years of experience is required.
- Experience developing and implementing manufacturing processes and production equipment. Strong knowledge of:PFMEA (Process Failure Mode and Effects Analysis) Control Plans Process Flow Development Process Validation Lean Manufacturing DFM (Design for Manufacturability)Experience with assembly processes, tooling, fixtures, and automation systems.
- Proficiency in interpreting engineering drawings, CAD models, and technical specifications.
- Strong troubleshooting, problem-solving, and project management skills.
- Proficient in Microsoft Excel, PowerPoint, and Word.
- Preferred SkillsExperience in automotive, aerospace, medical device, electronics, or other high-volume manufacturing environments.
- Knowledge of APQP, PPAP, MSA, and SPC methodologies.
- Experience with automated assembly and test systems. Lean Six Sigma Green Belt or Black Belt certification preferred.
