Software Engineer, Robot Manufacturing

Neuralink · Austin, TX

Job ID (this archive)	MFG-085
Employer	Neuralink
Location	Austin, TX
Career stage	New grad / early career
Location group	Texas (outside DFW)
Major (archive tag)	Software Engineering
Sector area	Factory software & data
Industry (LinkedIn)	Technology, Information and Internet
Pay listed	Not listed
Stated rules	No GPA or sponsorship rule stated
Posted / closes	2026-10-28 · 2027-04-26
Status when checked	Accepting applications on LinkedIn (Nov 8, 2026)
Source page	https://www.linkedin.com/jobs/view/4484128087/
Captured	2026-11-08

Full posting text as it appeared on LinkedIn on Nov 8, 2026, saved for ECS 1100. Postings change and close often; open the source page above for the current version before applying.

At a glance

What you would do

Software engineer building full-stack inventory tracking and lifecycle software that engineers use to assemble, calibrate, and verify neurosurgical robots.

Who can apply

- **Majors named:** Computer Science
- **Degree and experience:** Bachelor's in computer science or equivalent work experience; strong full-stack skills and experience building software real people use.

Skills mentioned

Teamwork & collaboration · Automation & controls · Supply chain, planning & logistics · CAD

Full posting text

- About Neuralink:We are creating devices that enable a bi-directional interface with the brain. These devices allow us to restore movement to the paralyzed, restore sight to the blind, and revolutionize how humans interact with their digital world. Team Description:The Robot Manufacturing Software team allows Neuralink to build neurosurgical robots at a scale that has never been done before. Every robot that ships was tracked, assembled, calibrated, and verified through the software you'll build. This is the backbone of how we scale from early production to meeting real clinical demand.
- We're a small, tightly knit team - and this role is the first dedicated owner of the robot manufacturing software stack. As the company scales, so will the complexity, and you'll be the one designing and building the systems that make all of that possible.
- We operate as a tight, high-trust team. You'll have direct ownership and the autonomy to solve hard problems, but also high expectations.

- We're moving fast to meet clinical demand and keep up with deployments. 60-hour weeks are not uncommon, and there are stretches where the pace is high. This isn't for everyone.
- Job Description and Responsibilities:As a Software Engineer on the Robot Manufacturing Team, you'll work directly with robot engineers and surgical engineers to understand what they need, then build it. You won't be handed a spec doc from a product manager three layers removed from the problem. Some days you're heads-down writing code all day. On another day, you might spend a morning pairing with a robot engineer to understand a new calibration process, then spend the afternoon building the tracking system for it. The constant is that you're close to the problem and shipping solutions quickly. Projects you will work on: Inventory and warehouse management systems that track every component going into a neurosurgical robot - from raw materials through final assemblyLifecycle management software that engineers use to build, calibrate, verify, and maintain robots throughout their entire lifespanWhatever else needs building. The scope of problems here is wide and constantly evolving. You'll have real ownership over the direction this stack growsRequired Qualifications: A bachelor’s degree in Computer Science or equivalent demonstrated work experienceStrong full-stack engineering skills. Our stack is Ruby on Rails and React/TypeScript, but we care more about your ability to learn and ship than your resume matching our package.jsonYou've built software that real people useYou can talk to users, understand their problems, and translate that into well-built software. This role is deeply collaborativeYou take ownership. When your software breaks on the floor, you fix itYou're comfortable with ambiguity. Manufacturing at this scale hasn't been done before for this kind of device Expected Compensation:The anticipated base salary for this position is expected to be within the following range. Your actual base pay will be determined by your job-related skills, experience, and relevant education or training. We also believe in aligning our employees’ success with the company's long-term growth. As such, in addition to base salary, Neuralink offers equity compensation (in the form of Restricted Stock Units (RSU)) for all full-time employees.
- Base Salary Range:: $135,000 USD - $216,000 USD What We Offer:Full-time employees are eligible for the following benefits listed below.
- An opportunity to change the world and work with some of the smartest and most talented experts from different fieldsGrowth potential; we rapidly advance team members who have an outsized impactExcellent medical, dental, and vision insurance through a PPO planPaid holidaysCommuter benefitsMeals providedEquity (RSUs) *Temporary Employees & Interns excluded401(k) plan *Interns initially excluded until they work 1,000 hoursParental leave *Temporary Employees & Interns excludedFlexible time off *Temporary Employees & Interns excluded
