At a glance

What you would do

Embedded software engineer designing, coding and testing software that communicates with other parts of industrial automation products, as part of an Agile team.

Who can apply

- **Majors named:** No specific major named
- **Degree and experience:** Bachelor's degree or equivalent experience; Computer/Software/Electrical Engineering and 1 year embedded experience preferred; U.S. work authorization

Skills mentioned

Teamwork & collaboration · Communication · Problem solving & root cause · Automation & controls · Lean / Six Sigma / continuous improvement · Programming

Full posting text

Rockwell Automation is a global technology leader focused on helping the world’s manufacturers be more productive, sustainable, and agile. With more than 28,000 employees who make the world better every day, we know we have something special. Behind our customers - amazing companies that help feed the world, provide life-saving medicine on a global scale, and focus on clean water and green mobility - our people are energized problem solvers that take pride in how the work we do changes the world for the better.

We welcome all makers, forward thinkers, and problem solvers who are looking for a place to do their best work. And if that’s you we would love to have you join us!

Responsibilities

Job Description

- Design, implement, and test software that communicates to other parts of the product or system via APIs, services or protocols.
- Operate across the entire software development life cycle as part of an Agile development team: requirements management, design, implementation, test, release, and maintenance.
- Directly apply technical skills to assigned tasks, having some complex features. Use proven software design techniques, procedures and criteria to complete a sequence of related engineering tasks (i.e. investigate, design, develop, test) in accordance with the company's quality guidelines.
- Participate in peer reviews of documents, designs, code, test cases and user documentation.
- Perform unit or functional testing of developed software to ensure correct operation per functional requirements and compatibility with other components in the system.
- Continuous improvement of software development capabilities by keeping abreast of current trends in the areas of software development practices, technology utilization and development tools.
- Effectively collaborate with others through mutually supportive professional relationships, open and direct communications and respect. Cope with and leverage personality differences and differences of opinion.
- Coach less experienced engineers on design and implementation techniques.

The Essentials - You Will Have

Bachelor's Degree or equivalent relevant experienceLegal authorization to work in the US is required. We will not sponsor individuals for employment visas, now or in the future, for this job opening.

The Preferred - You Might Also Have

- Typically requires 1 years of experience (Embedded development experience)Bachelor's degree in Computer Engineering, Software Engineering, or Electrical Engineering with a Computer Science emphasis. Demonstrated competence in object-oriented design, and the use of an object-oriented programming language.
- Seek knowledge of and keep informed of current trends in embedded systems technology, including design techniques, development tools, and overall process improvements.
- Experience with embedded software development tools such as In-Circuit Emulators, Debuggers, Oscilloscopes, etc.
- Proficiency in C++Experience with Python or equivalent scripting languageExperience with Realtime OS utilization (RTOS)Experience with both ARM and x86 architecturesExperience with software requirements analysis and software testing, including automation frameworksExperience working with industrial protocols, especially Common Industrial Protocol (CIP)Experience in using open source tools like Git and JenkinsExcellent collaborative skills. You should be a team player.
- A passion for embedded software development.

This position is part of a job family. Experience will be the determining factor for position level and compensation
