RFAB Module Industrial Engineer

Texas Instruments · Richardson, TX

Job ID (this archive)	MFG-098
Employer	Texas Instruments
Location	Richardson, TX
Career stage	Experienced
Location group	DFW area
Major (archive tag)	Systems Engineering
Sector area	Electronics & semiconductor manufacturing
Industry (LinkedIn)	Semiconductor Manufacturing
Pay listed	Not listed
Stated rules	U.S. citizen / ITAR
Posted / closes	2026-10-29 · 2026-12-15
Status when checked	Accepting applications on LinkedIn (Nov 1, 2026)
Source page	https://www.linkedin.com/jobs/view/4390756351/
Captured	2026-11-01

Full posting text as it appeared on LinkedIn on Nov 1, 2026, saved for ECS 1100. Postings change and close often; open the source page above for the current version before applying.

At a glance

What you would do

Industrial engineer modeling chip fab capacity, analyzing cycle time and equipment data, and recommending schedules and investments to increase output.

Who can apply

- **Majors named:** Industrial Engineering, Systems Engineering, Manufacturing Engineering, Operations Research
- **Degree and experience:** Bachelor's in Industrial, Systems or Manufacturing Engineering, Operations Research or related; 3+ years relevant experience

Skills mentioned

Teamwork & collaboration · Communication · Problem solving & root cause · Automation & controls

Full posting text

Job Description

About the job

Do you have experience in industrial engineering and process planning? Do you want to work for an organization that values your opinion? Do you want to work for an organization where you can play a pivotal role in several different areas? Look no further. Texas Instruments (TI) is looking for an experienced Industrial Engineer to support our manufacturing operations. Here's your opportunity to work in a vibrant and dynamic team-oriented environment with exposure to a variety of state-of-the art applications each day.

Responsibilities Include

Lead line and operational performance analysis to identify output and cycle time improvement opportunitiesMaintain capacity modeling data integrity via engineering change control monitoring and frequent communication with tool owners to ensure model readinessGather and understand information required to perform capacity analysis and production impactStrong analytical and problem-solving skills Performing capacity analysis, cost analysis and operational “what-if” analysis to support capital investment and operational decision makingOptimize equipment run schedule to maximize asset utilization and outputCollect and validate operational performance data via strong analytic methods on automation and system logs to analyze throughput impact of various process requirementEffectively interact across all the different departments and groups to drive execution plansProactively analyze factory execution entitlement through utilizing predictive modeling techniques to drive operational performanceAnalyzing and maintaining large data setsLeverage operational data to identify performance trends, propose leading indicators, and provide predictive information to support execution decisions.Analyze complex operational challenges involving multiple stakeholders, driving towards optimal solutions in a complex and dynamic manufacturing environmentIdentify operational gaps, lead problem formulation, determine root cause, and implement creative and effective solutionsAutomating data extraction and manufacturing processesDetermining starts and mixes that we can support for the current time period and for the future look-ahead based on our capacity, constraints, available tools, tool performance and future process releases scheduled in our factoryProviding a list of short-term and long-term focused toolsets for the modules to work on Identifying opportunities to improve cycle time and increase our capacity models' ability to support operational decision makingPerforming equipment loading studies and determining methods for flow linearization and reduction in variationInterfacing with engineering, manufacturing, and planning/coordinating the release of new methods, flows, and processesEstimating manufacturing cost, determining time standards, and making recommendations for tooling and process requirements of new or existing process flows

Qualifications

Minimum Requirements

Bachelor’s degree in Industrial Engineering, System Engineering, Manufacturing Engineering, Operations Research or related engineering degree.3+ years of relevant experienceAbility to work in clean room environment wearing smock

Preferred Qualifications

- Intermediate proficiency in SQL and data visualization software.
- Ability to work in clean room environment wearing smock.
- Ability to initiate activities to support fab and group goals. Ability to work and interact equally with all fab disciplines and all levels of fab organization. Demonstrated strong analytical and problem-solving skills.
- Strong verbal and written communication skills. Ability to work in teams and collaborate effectively with people in different functions.
- Strong time management skills that enable on-time project delivery.
- Demonstrated ability to build strong, influential relationships.
- Ability to work effectively in a fast-paced and rapidly changing environment. Ability to take the initiative and drive for results.
- Ability to perform basic computer programing / coding techniques to solve engineering problems.
- Experience in capacity modeling and working knowledge of simulation models is an added advantage.

About Us

Why TI?

The future starts here. As a TIer, you'll play a critical role in defining the next era of semiconductor technology and help create the innovations that shape the world around us.Surround yourself with a team of innovators who value your unique perspective and will challenge you to bring your best self to work every day. We believe that fostering a culture of collaboration fuels both personal growth and technological breakthroughs. Explore our company culture .At TI, your success goes beyond your work. Take advantage of comprehensive benefits designed to support your total well-being at work and in life, from competitive compensation to extensive health coverage and wellness programs. Learn more about our benefits offerings .

About Texas Instruments

Texas Instruments Incorporated (Nasdaq: TXN) is a global semiconductor company that designs, manufactures and sells analog and embedded processing chips for markets such as industrial, automotive, data center, personal electronics and communications equipment. At our core, we have a passion to create a better world by making electronics more affordable through semiconductors. This passion is alive today as each generation of innovation builds upon the last to make our technology more reliable, more affordable and lower power, making it possible for semiconductors to go into electronics everywhere. Learn more at TI.com .

Texas Instruments is an equal opportunity employer and supports a diverse, inclusive work environment. All qualified applicants will receive consideration for employment without regard to race, color, religion, creed, disability, genetic information, national origin, gender, gender identity and expression, age, sexual orientation, marital status, veteran status, or any other characteristic protected by federal, state, or local laws.

If you are interested in this position, please apply to this requisition.

About The Team

TI does not make recruiting or hiring decisions based on citizenship, immigration status or national origin. However, if TI determines that information access or export control restrictions based upon applicable laws and regulations would prohibit you from working in this position without first obtaining an export license, TI expressly reserves the right not to seek such a license for you and either offer you a different position that does not require an export license or decline to move forward with your employment.
